the jct standard forms of building contract require a thorough understanding of their procedural requirements as well as their legal implications they require both the contractor and the architect on behalf of the employer to send a wide range of notices and letters if

each party is to protect its legitimate interests the main contract forms are also supported by complex sub contract documentation therefore it is not surprising that when this book of specimen letters notices and forms was first published it was widely welcomed by the construction industry the book provides examples of documentation likely to be required for a contract under the following jct forms the standard form of building contract the intermediate form of building contract the agreement for minor building works the standard form of building contract with contractor s design it includes a commentary on the practical implications of the various documents and highlights the points to be watched the new edition takes into account the wide range of amendments to the latest editions of the standard forms following the housing grants construction and regeneration act 1996 and in particular the new payment and adjudication provisions for the first time it features documentation for use with the jct design and build form

documents such as drawings memos and specifications form an essential function in the design and construction industry throughout the lifecycle of a built asset starting from an initial design idea right through to a final built form and its ongoing management thousands even millions of documents can be used to convey various forms of information to a range of interested parties in many ways therefore the success of

a design or construction based company relies upon an understanding of the use of documents as well as the technologies and techniques that are used to create them the digital document provides an extensive background to the issues and technologies surrounding this very important topic it examines a technical subject in an insightful manner that is neither intimidating nor confusing even to the novice computer user by introducing the subject through a series of preliminary reviews of current practices and essential computing technologies the reader is able to better appreciate the benefits and capabilities of a wide range of digital document types this book explores the role of documents in a professional practice examines the components capabilities viability and use of digital documents in the design and construction industry and identifies and explains many of the standards in use today in order to facilitate a better understanding of digital document technologies a number of essential reviews are provided including the definition and purpose of a document how documents are typically used by design professionals the nature of the digital document environment the data types which make up digital documents the digital document is an essential reference for the architect engineer or design professional that wants to

design build construction has become so widely accepted that owners and their advisors must seriously consider this approach when making decisions about project delivery with its opportunities for cost containment and substantial risk transfer design build is increasingly becoming the delivery method of choice for owners with challenging funding limitations but deciding to use the design build system for underground projects is one thing successfully implementing it is quite another design build subsurface projects second edition can help bridge that gap first

published in 2002 this cutting edge book provides a straightforward comprehensive look at how to make design build work on complicated projects involving tunnels highways dams and deep foundations the authors are a who s who of subsurface construction experts many of whom are key players in the most high profile and challenging projects in the world drawing upon their wealth of practical experience they spell out a list of common sense best practices that can be used by today s project owners and designers be advised these authors don t shy away from the many thorny issues of design build nor are they unabashed cheerleaders they dispassionately explore both the advantages and disadvantages of this system which must be carefully weighed and evaluated so planners can decide what is best for their projects based on all the important variables including third party impacts and environmental community concerns you ll find extensive information about procurement as well as risk allocation issues which are significantly different from the design bid build approach team structure agreements design development subsurface exploration geotechnical reports construction phase issues and insurance are also examined in great detail design build subsurface projects is an indispensable resource for owners engineers construction

managers contractors and others involved in the design and construction of subsurface projects you ll gain a thorough understanding of how and why the system works and where the pitfalls can arise the authors years of experience will benefit even the most seasoned of practitioners

visual information retrieval vir is an active and vibrant research area which attempts at providing means for organizing indexing annotating and retrieving visual information images and videos from large unstructured repositories the goal of vir is to retrieve matches ranked by their relevance to a given query which is often expressed as an example image and or a series of keywords during its early years 1995 2000 the research efforts were dominated by content based approaches contributed primarily by the image and video processing community during the past decade it was widely recognized that the challenges imposed by the lack of coincidence between an image s visual contents and its semantic interpretation also known as semantic gap required a clever use of textual metadata in addition to information extracted from the image s pixel contents to make image and video retrieval solutions efficient and effective the need to bridge or at least narrow the semantic gap has been one of the driving forces behind current vir research additionally other related research problems

and market opportunities have started to emerge offering a broad range of exciting problems for computer scientists and engineers to work on in this introductory book we focus on a subset of vir problems where the media consists of images and the indexing and retrieval methods are based on the pixel contents of those images an approach known as content based image retrieval cbir we present an implementation oriented overview of cbir concepts techniques algorithms and figures of merit most chapters are supported by examples written in java using lucene an open source java based indexing and search implementation and lire lucene image retrieval an open source java based library for cbir

this volume brings together twelve empirical studies on ditransitive constructions in germanic languages and their varieties past and present specifically the volume includes contributions on a wide variety of germanic languages including english dutch and german but also danish swedish and norwegian as well as lesser studied ones such as faroese while the first part of the volume focuses on diachronic aspects the second part showcases a variety of synchronic aspects relating to ditransitive patterns methodologically the volume covers both experimental and corpus based studies questions addressed by the papers in the volume are among others issues like the cross linguistic pervasiveness and cognitive reality of factors involved in the choice between different ditransitive constructions or differences and similarities in the diachronic development of ditransitives the volume s broad scope and comparative

perspective offers comprehensive insights into well known phenomena and furthers our understanding of variation across languages of the same family
