this research topic is the second volume of the community series in novel biomarkers for predicting response to cancer immunotherapy please see volume i here immunotherapy has revolutionized the treatment of malignancies targeting of immune checkpoints cytotoxic t lymphocyte associated protein 4 programmed cell death protein 1 pd 1 and its ligand pd l1 has led to improving survival in a subset of patients despite their remarkable success clinical benefit remains limited to only a subset of patients a significant limitation behind these current treatment modalities is an irregularity in clinical response which is especially pronounced among checkpoint inhibition currently relevant predictors of cancer immunotherapy response include microsatellite instability high deficient mismatch repair msi h dmmr expression of pd l1 tumor mutation burden tmb immune genomic characteristics and tumor infiltrating lymphocytes tils however none of them have sufficient evidence to be a stratification factor moreover as the combined strategies for effective cancer immunotherapy had been developed in multiple tumors such as immunotherapy combined with chemotherapy radiotherapy targeted therapy and anti angiogenesis therapy therefore the development of novel biomarkers endowed with high sensitivity specificity and accuracy able to identify which patients may truly benefit from the treatment with cancer immunotherapy would allow to refine the therapeutic selection and to better tailor the treatment strategy this research topic aims to focus on the advances in the discoveries of novel biomarkers for predicting response to cancer immunotherapy in various tumors we welcome the submission of original research and review articles that include biomarkers in clinical study and applications as well as technologies or discoveries in experimental approaches

the inspirational bestseller that ignited a movement and asked us to find our why discover the book that is captivating millions on tiktok and that served as the basis for one of the most popular ted talks of all time with more than 56 million views and counting over a decade ago simon sinek started a movement that inspired millions to demand purpose at work to ask what was the why of their organization since then millions have been touched by the power of his ideas and these ideas remain as relevant and timely as ever start with why asks and answers the questions why are some people and organizations more innovative more influential and more profitable than others why do some command greater loyalty from customers and employees alike even among the successful why are so few able to repeat their success over and over people like martin luther king jr steve jobs and the wright brothers had little in common but they all started with why they realized that people won t truly buy into a

product service movement or idea until they understand the why behind it start with why shows that the leaders who have had the greatest influence in the world all think act and communicate the same way and it s the opposite of what everyone else does sinek calls this powerful idea the golden circle and it provides a framework upon which organizations can be built movements can be led and people can be inspired and it all starts with why

pollan keeps you turning the pages cleareyed and assured new york times a 1 new york times bestseller new york times book review 10 best books of 2018 and new york times notable book a brilliant and brave investigation into the medical and scientific revolution taking place around psychedelic drugs and the spellbinding story of his own life changing psychedelic experiences when michael pollan set out to research how lsd and psilocybin the active ingredient in magic mushrooms are being used to provide relief to people suffering from difficult to treat conditions such as depression addiction and anxiety he did not intend to write what is undoubtedly his most personal book but upon discovering how these remarkable substances are improving the lives not only of the mentally ill but also of healthy people coming to grips with the challenges of everyday life he decided to explore the landscape of the mind in the first person as well as the third thus began a singular adventure into various altered states of consciousness along with a dive deep into both the latest brain science and the thriving underground community of psychedelic therapists pollan sifts the historical record to separate the truth about these mysterious drugs from the myths that have surrounded them since the 1960s when a handful of psychedelic evangelists inadvertently catalyzed a powerful backlash against what was then a promising field of research a unique and elegant blend of science memoir travel writing history and medicine how to change your mind is a triumph of participatory journalism by turns dazzling and edifying it is the gripping account of a journey to an exciting and unexpected new frontier in our understanding of the mind the self and our place in the world the true subject of pollan s mental travelogue is not just

psychedelic drugs but also the eternal puzzle of human consciousness and how in a world that offers us both suffering and joy we can do our best to be fully present and find meaning in our lives

probabilistic models are becoming increasingly important in analysing the huge amount of data being produced by large scale dna sequencing efforts such as the human genome project for example hidden markov models are used for analysing biological sequences linguistic grammar based probabilistic models for identifying rna secondary structure and probabilistic evolutionary models for inferring phylogenies of sequences from different organisms this book gives a unified up to date and self contained account with a bayesian slant of such methods and more generally to probabilistic methods of sequence analysis written by an interdisciplinary team of authors it aims to be accessible to molecular biologists computer scientists and mathematicians with no formal knowledge of the other fields and at the same time present the state of the art in this new and highly important field
