The Impact of Desert Dust Across the Mediterranean 2013-04-17 the atmosphere is an important pathway for the transport of continentally derived material to the oceans in this respect the mediterranean sea is of special importance because its atmosphere receives inputs of anthropogenic aerosols from the north and desert derived saharan dusts from the south the dusts much of which is transported in the form of seasonal pulses have important effects on climate marine chemistry and sedimentation in the mediterranean sea this volume brings together reviews and specific topic papers on the following aspects of saharan dust transport to the mediterranean sea i the modelling of saharan dust transport ii the chemistry and mineralogy of the dusts and their effect on precipitation iii the contribution of the dusts to marine sedimentation iv the aerobiology of the dusts and v climatic implications of saharan dust transport the volume is aimed at students and researchers with an interest in the climate biogeochemistry and geology of the mediterranean sea

Desert Dust in the Global System 2006-09-05 dust storms are a vital component of the environment this book explores and summarises recent research on where dust storms originate why dust storms are generated where dust is transported and deposited the nature of dust deposits and the changing frequency of dust storms over a range of time scales it is the first global study of causes and effects of dust storms which are one of the increasing nature catastrophes

Desert Dust 1981 digicat publishing presents to you this special edition of desert dust by edwin l sabin digicat publishing considers every written word to be a legacy of humankind every digicat book has been carefully reproduced for republishing in a new modern format the books are available in print as well as ebooks digicat hopes you will treat this work with the acknowledgment and passion it deserves as a classic of world literature

Desert Dust 2022-08-01 on july 12 1945 a golden palomino was caught in the red desert of wyoming by frank wild horse robbins later that same day a photographer out of rawlins wyoming named verne wood snapped a photo of that same horse it would prove to be the photo of a lifetime and it s capture like that of the horse would change the lives of both verne and frank forever when verne saw the photo he knew he had something special so he entered it in the denver post s photo contest it won the grand prize and soon the photo found its way to the wyoming state capital the united states senate chambers the house of commons in london and the canadian parliament in toronto the likeness of the famous horse could be found in the plains hotel in cheyenne the double shot bar in rock river the virginian hotel in medicine bow the desert bar in wamsutter and the saddle grill café in rawlins whose palomino room was a homage to the horse on top of that nearly every postcard sales rack from omaha nebraska to reno nevada offered postcards with the horse s famous image the horse would go on to be known as desert dust though the origin was never determined both men would eventually claim to have given the horse its famous name recreations of desert dust s image were reproduced on leather purses wallets and belts by inmates of the wyoming state penitentiary and other craftsman desert dust has been an inspiration for poems prose oil paintings and songs he has become the most famous horse in the state but the story doesn t end there along the way desert dust was the subject of a hollywood short nominated for an academy award an international travelogue a court case with one of the strangest cut the baby in half rulings ever issued by any judge anywhere and a murder frank and verne would eventually find themselves on opposite sides of many different controversies the plight of wild horses using an airplane to capture wild horses and of course the photo itself

Desert Dust 1974-01-01 dust storms produced by the removal of surface materials from the world's drylands are a vital component of the environment this is because of their role in biogeochemical cycling their potential influence on climate their role in sediment accumulation and their influence on human affairs this book which is exhaustively referenced explores and summarises recent research on where dust storms originate why dust storms are generated where dust is transported and deposited the nature of dust deposits and the changing frequency of dust storms over a range of time scales

Desert Dust 2016-06-23 current earth system models esms struggle to accurately simulate the spatiotemporal variability of the desert dust cycle and the impact of dust aerosols on earth's climate and ecosystems this is in part because these models lack several essential land surface aeolian processes that couple dust with climate and land surface changes we address these fundamental problems and improve the representation of dust emission in esms using both a process based approach and a data driven approach first we develop a new process based dust emission scheme that couples dust emission better with simulated land surface processes in esms with improved descriptions of 1 the effect of soil texture on the dust emission threshold 2 the effects of rocks and vegetation on dissipating the surface wind stress 3 the effects of boundary layer turbulence on driving intermittent dust emissions and 4 a simple methodology to rescale coarser resolution emission simulations to match the spatial variability of higher resolution emission simulations in esms we use the revised dust emission

scheme to model global dust emissions in a standalone model forced by reanalyzed meteorology and land surface fields the resulting simulated emissions show substantially better agreement than other existing emission models against observationally constrained regional dust emissions second we implement the new emission scheme into the community earth system model version 2 cesm2 for a present day 2004 2008 dust cycle simulation the results show that our scheme significantly reduces the cesm2 simulation bias against observations compared to cesm s default emission scheme and improves the correlations against observations of key dust variables such as dust aerosol optical depth daod and surface particulate matter pm concentration third we use a data driven approach to construct a globally gridded historical 1841 2000 dust emission inventory by empirically combining multiple sedimentary records of dust deposition with observational and modeling constraints on the modern day dust cycle the derived inventory contains the interdecadal variability of dust emissions as forced by the rising trends in the observed deposition time series which show a global emission increase of sim 50 for 1841 2000 we evaluate the inventory s effectiveness in enforcing a historical dust increase in esms by using it to force a long term 1851 2000 dust cycle simulation in cesm2 the simulated dust deposition is in reasonable agreement with the long term variability in most dust deposition records and with independently measured long term trends in dust concentrations this contrasts with dust simulations from the coupled model intercomparison project cmip6 which show little to no secular trends our studies thus provide two approaches to advancing the earth system modeling of desert dust aerosols the new process based dust emission scheme enables more accurate simulations of the dust cycle s present day spatial and day to day variability enhancing short term weather and air pollution forecasting power on a daily timescale the empirically derived dust emission inventory allows realistic simulations of the historical dust increase thereby improving the accuracy of aerosol radiative forcing predictions in climate change assessments across multidecadal timescales both approaches will thus improve dust cycle simulations in esms across multiple timescales of interest

Desert Dust in the Global System 2006 desert dust country is a companion book to the will rogers medallion award winning book desert dust it contains recipes and photographs from the area where the horse was captured as well as memories from its author carmalen gillilan who was with her husband step for step along the entire journey to find out the truth behind the iconic photograph

Desert Dust 2016-04-22 near the end of world war ii and only weeks before the start of the cold war a wild palomino stallion was captured and photographed in the red desert of wyoming almost overnight the photograph became a sensation an iconic american symbol of strength independence and freedom after winning a national contest the photograph landed in the wyoming state capital the house of commons in london the canadian parliament in toronto and the senate chambers of the united states along the way the stallion was the subject of an academy award nominated short two travelogues and articles in several national magazines the photograph was displayed in bars restaurants and public buildings it was reproduced in a wide variety of forms that is until a lawsuit with one of the strangest judgments ever issued curtailed everything desert dust is the story of one man s passion to uncover the true story of two men a wild stallion and the photograph that changed their lives forever

Desert Dust 2015-09-17 on the trail of desert dust is a unique collection of recipes photographs and memories along with a little western history and lore it is the companion book to the multi award winning desert dust one man s passion to uncover

the true story behind an iconic photograph

The Influence of Desert Dust on Ocean Productivity 2007 on July 12, 1945, a golden palomino was caught in the red desert of Wyoming by Frank Wild Horse Robbins, who had built a business rounding up the wild mustangs that roamed the region using airplanes to spot the elusive creatures. Later that same day, a photographer out of Rawlins, Wyoming, named Verne Woods snapped a photo of that same horse that he would go on to enter in the Denver Post's annual photo contest. The photo was the grand prize winner and it also captured the imagination of people all over the world. Prints found their way to the Wyoming State Capital, the United States Senate Chambers, the House of Commons in London, and the Canadian Parliament in Toronto. The likeness of the famous horse could be found in the Plains Hotel in Cheyenne, the Double Shot Bar in Rock River, the Virginian Hotel in Medicine Bow, the Desert Bar in Wamsutter, and the Saddle Grill Café in Rawlins, where the restaurant built a palomino room in homage to the horse. On top of that, nearly every postcard sales rack from Omaha, Nebraska, to Reno, Nevada, offered postcards with the horse's famous image. In the late 1940s, the horse, which would become known as Desert Dust, became the most famous horse in Wyoming. His image was reproduced on leather purses, wallets, and belts by inmates of the Wyoming State Penitentiary, and other craftsmen. Desert Dust was the inspiration for poems, prose, oil paintings, and songs, and a Hollywood short that was nominated for an Academy Award. Frank Robbins and Verne Woods would eventually find themselves on opposite sides of many different controversies: the plight of wild horses, using an airplane to capture wild horses, and of course, the ownership of the photo itself, which led to a feud between the two men. On the order of the Hatfields and McCoy's, Desert Dust would eventually be murdered in his own pasture, a mystery that is unsolved to this very day.

Improving the Representation of Desert Dust Emission in Earth System Models Using Process-based and Empirical Approaches 2023 excerpt from *Desert Dust in the Estimate of the Affable Brakeman*, a gentleman wearing sky blue army pantaloons tucked into cowhide boots, half-buttoned vest, flannel shirt open at the throat, and upon his red hair, a flaring brimmed black slouch hat. We were making a fair average of twenty miles an hour across the greatest country on earth. It was a flat country of far horizons and for vast stretches peopled mainly as one might judge from the car windows by antelope and the equally curious rodents styled prairie dogs. Yet despite the novelty of such a ride into that unknown New West, now being spanned at giant's strides by the miraculous Pacific Railway, behold me surfeited with already five days' steady travel engrossed chiefly in observing a clear dainty profile and waiting for the glimpses, time to time, of a pair of exquisite blue eyes. Desert Dust: origin, characteristics, and effects on man 1981 Hannah Holmes. A mesmerizing expedition around our dusty world. Some see dust as dull and useless stuff, but in the hands of author Hannah Holmes, it becomes a dazzling and mysterious force. Dust we discover built the planet we walk upon, and it tinkers with the weather and spices the air we breathe. Billions of tons of it rise annually into the air: the dust of deserts and forgotten kings, mixing with volcanic ash, sea salt, leaf fragments, scales from butterfly wings, shreds of T-shirts, and fireplace soot. Eventually, though, all this dust must settle. The story of restless dust begins.

among exploding stars then treks through the dinosaur beds of the gobi desert drills into antarctic glaciers filters living dusts from the wind and probes the dark underbelly of the living room couch along the way holmes introduces a delightful cast of characters the scientists who study dust some investigate its dark side how it killed off dinosaurs and how its industrial descendents are killing us today others sample the shower of saharan dust that nourishes caribbean jungles or venture into the microscopic jungle of the bedroom carpet like the secret life of dust however all of them unveil the mayhem and magic wrought by little things hannah holmes portland me is a science and natural history writer for the discovery channel online her freelance work has been widely published appearing in the los angeles times magazine the new york times magazine outside sierra national geographic traveler and escape her broadcast work has been featured on living on earth and the discovery channel online s science live

On the Trail of Desert Dust 2022-11 this book highlights the aeolian processes in the desert zone of kazakhstan and central asian deserts and analyzes the current status of dust and sand storms in central asia and kazakhstan it also highlights the analyses dynamics and long term observations of storms on the basis of numerous cartographic materials and satellite images dust sand storms are a common and important phenomenon in the arid and semi arid regions of kazakhstan and central asia as well especially in its southern parts where areas are covered by a great variety of deserts and offer a significant source of mineral and salt aerosols the deserts of kazakhstan mostly cover lowlands and extend from the eastern coast of the caspian sea to the piedmonts of the tien shan mountain in kazakhstan and central asia desertification processes due to wind erosion in the form of dust sand storms were observed in semi desert and desert landscapes

Desert Dust: a Novel 1923 this volume presents state of the art research about mineral dust including results from field campaigns satellite observations laboratory studies computer modelling and theoretical studies dust research is a new dynamic and fast growing area of science and due to its multiple roles in the earth system dust has become a fascinating topic for many scientific disciplines aspects of dust research covered in this book reach from timescales of minutes as with dust devils cloud processes and radiation to millennia as with loess formation and oceanic sediments making dust both a player and recorder of environmental change the book is structured in four main parts that explore characteristics of dust the global dust cycle impacts of dust on the earth system and dust as a climate indicator the chapters in these parts provide a comprehensive detailed overview of this highly interdisciplinary subject the contributions presented here cover dust from source to sink and describe all the processes dust particles undergo while travelling through the atmosphere chapters explore how dust is lifted and transported how it affects radiation clouds regional circulations precipitation and chemical processes in the atmosphere and how it deteriorates air quality the book explores how dust is removed from the atmosphere by gravitational settling turbulence or precipitation how iron contained in dust fertilizes terrestrial and marine ecosystems and about the role that dust plays in human health we learn how dust is observed simulated using computer models and forecast the book also details the role of dust deposits for climate reconstructions scientific observations and results are presented along with numerous illustrations this work has an interdisciplinary appeal and will engage scholars in geology geography chemistry meteorology and physics amongst others with an interest in the earth system and environmental change body

RECENT STUDIES OF THE SUSPENSION OF DESERT DUST AND RESUSPENSION OF TOXIC AEROSOL DUE TO WIND. 1973 the lake eyre region in australia is the primary source of dust in the southern hemisphere little is known about the microbial ecology

of this area and its relationship if any to the bacteria found in dust and aerosols initially sediment and adjacent aerosol samples were collected from a small lake in victoria which routinely deflated bacterial populations in both samples were compared by culturing followed by rep pcr and 16s rna high throughput sequencing hts bacillus subtilis isolates of the same rep type and sequences representing the same otus of salinomicrobium and delftia were present in both aerosols and sediment these results indicated that bacteria could be tracked through the environment regardless of the vast microbial diversity observed using both techniques subsequently bacterial communities in aerosols collected off the coast of australia were characterised and two different sampling methods compared filtration and a high volume swirling liquid sampler omni 3000 the weather conditions were calm during both voyages the microflora of the omni samples showed less diversity than the filter samples delftia methylobacterium and stenotrophomonas were present in samples from both voyages hts was then used to compare the microbiology of ler sediment aerosols and samples collected from major dust storms which affected eastern australia in september 2009 there was vast microbial diversity within and among ler sediments of different types desert crusts salt lake crusts and fluff collected in the same location collected over time and collected in different locations comparison of the microflora of dust to ler sediments revealed similarities to samples collected from specific locations that broadly correlated to the proposed source of the dust storm determined by multidisciplinary analyses dominant otus representing delftia stenotrophomonas acidovorax and other taxa were present in dust and source samples with many of these genera also found in aerosols collected from different locations our results highlight the vast microbial diversity across the different samples collected and has identified some of the dominant taxa in the australian environment

Global Observations and Spectral Characteristics of Desert Dust and Biomass Burning Aerosols 2005 the nato advanced research workshop on paleoclimatology and paleometeorology modern and past patterns of global atmospheric transport held at oracle arizona usa from november 17 19 1987 brought together atmospheric chemists physicists and meteorologists who study the origin and transport of modern day mineral and biological aerosols with geologists and paleobotanists who study the sedimentary record of eolian and hydrologic processes along with modelers who study and conceptualize the processes influencing atmospheric transport at present and in the past presentations at the workshop provided a guide to our present knowledge of the entire spectrum of processes and phenomena important to the generation transport and deposition of eolian terrigenous material that ultimately becomes part of the geologic record and the modeling techniques that used to represent these processes the presentations on the geologic record of eolian deposition documented our present understanding of the nature and causes of climate change on time scales of the last glacial ages tens of thousands of years to time scales over which the arrangement of continents mountains and oceans has changed substantially tens of millions of years there has been a growing recognition of the importance of global climatic changes to the future well being of humanity in particular the climatic response to human alterations to the earth's surface and chemical composition has led to concern over the agricultural ecological and societal impacts of such potential global changes
