A Guide to Asperger Syndrome Christopher Gillberg,2002-07-25 This is an accessible 2002 handbook for all those touched by Asperger syndrome; clinicians, those affected and carers alike.

Vision and Mind Alva Noë,Evan Thompson,2002-10-25 The philosophy of perception is a microcosm of the metaphysics of mind. Its central problems—What is perception? What is the nature of perceptual consciousness? How can one fit an account of perceptual experience into a broader account of the nature of the mind and the world?—are at the heart of metaphysics. Rather than try to cover all of the many strands in the philosophy of perception, this book focuses on a particular orthodoxy about the nature of visual perception. The central problem for visual science has been to explain how the brain bridges the gap between what is given to the visual system and what is actually experienced by the perceiver. The orthodox view of perception is that it is a process whereby the brain, or a dedicated subsystem of the brain, builds up representations of relevant figures of the environment on the basis of information encoded by the sensory receptors. Most adherents of the orthodox view also believe that for every conscious perceptual state of the subject, there is a particular set of neurons whose activities are sufficient for the occurrence of that state. Some of the essays in this book defend the orthodoxy; most criticize it; and some propose alternatives to it. Many of the essays are classics. Contributors G.E.M. Anscombe, Dana Ballard, Daniel Dennett, Fred Dretske, Jerry Fodor, H.P. Grice, David Marr, Maurice Merleau-Ponty, Zenon Pylyshyn, Paul Snowdon, and P.F. Strawson

Africa's Future, Africa's Challenge Marito H. Garcia,Alan Pence,Judith Evans,2008-01-18 Early childhood, from birth through school entry, was largely invisible worldwide as a policy concern for much of the twentieth century. Children, in the eyes of most countries, were 'appendages' of their parents or simply embedded in the larger family structure. The child did not emerge as a separate social entity until school age (typically six or seven). 'Africa's Future, Africa's Challenge: Early Childhood Care and Development in Sub-Saharan Africa' focuses on the 130 million children south of the Sahel in this 0-6 age group. This book, the first of its kind, presents a balanced collection of articles written by African and non-African authors ranging from field practitioners to academicians and from members of government organizations to those of nongovernmental and local organizations. 'Africa's Future, Africa's Challenge' compiles the latest data and viewpoints on the state of Sub-Saharan Africa's children. Topics covered include the rationale for investing in young children, policy trends in

early childhood development (ECD), historical perspectives of ECD in Sub-Saharan Africa including indigenous approaches, new threats from HIV/AIDS, and the importance of fathers in children's lives. The book also addresses policy development and ECD implementation issues; presents the ECD programming experience in several countries, highlighting best practices and challenges; and evaluates the impact of ECD programs in a number of countries.

Pain in Older Persons Stephen J. Gibson, Debra K. Weiner, 2005 Highlights major new accomplishments in such areas as the neurobiology of pain, age-related psychological and cognitive differences in pain perception, and the assessment of pain in cognitively intact and cognitively impaired older persons. Treatments such as oral analgesics, physical therapy techniques, cognitive-behavioral therapy, complementary and alternative medicine applications, and multidisciplinary pain management clinics are discussed, as are low back pain, neuropathic pain, postoperative pain, and end-of-life issues.

Body and Spirit in the Middle Ages Gaia Gubbini, 2020-08-10 A crucial question throughout the Middle Ages, the relationship between body and spirit cannot be understood without an interdisciplinary approach - combining literature, philosophy and medicine. Gathering contributions by leading international scholars from these disciplines, the collected volume explores themes such as lovesickness, the five senses, the role of memory and passions, in order to shed new light on the complex nature of the medieval Self.

Reading, Writing and Dyslexia (Classic Edition) Andrew W Ellis, 2016-04-01 This is a classic edition of Andrew Ellis' acclaimed introduction to the scientific study of reading, writing and dyslexia, which now includes a new introduction from the author. The book describes the remarkable skills of reading and writing - how we acquire them, how we exercise them as skilled readers and writers, and what can go wrong with them in childhood disorders or as a result of brain damage. The new introduction reflects on some key research developments since the book was first published. *Reading, Writing and Dyslexia* is an engaging introduction to the field which is still completely relevant to today's readers. It will remain essential reading for all students of psychology and education, whilst also being accessible to parents and teachers.

Faecal Sludge Management Linda Strande, Damir Brdjanovic, 2014-08-15 It is estimated that literally billions of residents in urban and peri-urban areas of Africa, Asia, and Latin America are served by onsite sanitation systems (e.g. various types of latrines and septic tanks). Until recently, the management of faecal sludge from these onsite systems has been grossly neglected, partially as a result of them being considered temporary solutions until sewer-based systems could be implemented. However, the perception of onsite or decentralized sanitation technologies for urban areas is gradually changing, and is increasingly being considered as long-term, sustainable options in urban areas, especially in low- and middle-income countries that lack sewer infrastructures. This is the first book dedicated to faecal sludge management. It

compiles the current state of knowledge of the rapidly evolving field of faecal sludge management, and presents an integrated approach that includes technology, management, and planning based on Sandecs 20 years of experience in the field. Faecal Sludge Management: Systems Approach for Implementation and Operation addresses the organization of the entire faecal sludge management service chain, from the collection and transport of sludge, and the current state of knowledge of treatment options, to the final end use or disposal of treated sludge. The book also presents important factors to consider when evaluating and upscaling new treatment technology options. The book is designed for undergraduate and graduate students, and engineers and practitioners in the field who have some basic knowledge of environmental and/or wastewater engineering.

Lingua Ex Machina William H. Calvin, Derek Bickerton, 2000 A neuroscientist and a linguist show how evolution could have given rise to structured language. A machine for language? Certainly, say the neurophysiologists, busy studying the language specializations of the human brain and trying to identify their evolutionary antecedents. Linguists such as Noam Chomsky talk about machinelike modules in the brain for syntax, arguing that language is more an instinct (a complex behavior triggered by simple environmental stimuli) than an acquired skill like riding a bicycle. But structured language presents the same evolutionary problems as feathered forelimbs for flight: you need a lot of specializations to fly even a little bit. How do you get them, if evolution has no foresight and the intermediate stages do not have intermediate payoffs? Some say that the Darwinian scheme for gradual species self-improvement cannot explain our most valued human capability, the one that sets us so far above the apes, language itself. William Calvin and Derek Bickerton suggest that other evolutionary developments, not directly related to language, allowed language to evolve in a way that eventually promoted a Chomskian syntax. They compare these intermediate behaviors to the curb-cuts originally intended for wheelchair users. Their usefulness was soon discovered by users of strollers, shopping carts, rollerblades, and so on. The authors argue that reciprocal altruism and ballistic movement planning were curb-cuts that indirectly promoted the formation of structured language. Written in the form of a dialogue set in Bellagio, Italy, *Lingua ex Machina* presents an engaging challenge to those who view the human capacity for language as a winner-take-all war between Chomsky and Darwin.

The Mindful Brain Gerald M. Edelman, Vernon B. Mountcastle, 1982-03-30 A proposal by two eminent biological scientists for a mechanism whereby mind becomes manifest from the operations of brain tissue. This significant contribution to neuroscience consists of two papers, the first by Mountcastle and the second by Edelman. Between them, they examine from different but complementary directions the relationships that connect the higher brain—memory, learning, perception, thinking—with what goes on at the most basic levels of neural activity, with particular stress on the role of local neuronal circuits. Edelman's major hypothesis is that the conscious state results from phasic reentrant signaling occurring in parallel

processes that involve associations between stored patterns and current sensory or internal input. This selective process occurs by the polling of degenerate primary repertoires of neuronal groups that are formed during embryogenesis and development. Edelman's theory extrapolates to the brain the selectionistic immunological theories for which he was awarded the 1972 Nobel Prize in Physiology or Medicine. Mountcastle's paper reviews what is known about the actual structure of various parts of the neo cortex. He relates the large entities of the neocortex to their component modules—the local neuronal circuits—and shows how the complex interrelationships of such a distributed system can yield dynamic distributed functioning. There are strong conceptual parallels between Mountcastle's idea of cortical columns and their functional subunits and Edelman's concept of populations of neurons functioning as processors in a brain system based on selectional rather than instructional principles. These parallels are traced and put into perspective in Francis Schmitt's Introduction.

Ecritures digitales Claire Clivaz, 2019 *Ecritures digitales* aims to demonstrate how digital writing, as new technology, contributes to the emergence of a reconfigured relationship between the human body and the machines, and how this transition influences the Jewish-Christian textual corpus referred to as the Scriptures. *Ecritures digitales* souhaite démontrer de quelle manière l'écriture digitale, en tant que nouvelle technologie, contribue à l'émergence d'une relation innovante entre le corps humain et les machines, et influence le corpus textuel judéo-chrétien désigné comme «les Ecritures».

Kids in the Syndrome Mix of ADHD, LD, Autism Spectrum, Tourette's, Anxiety, and More! Martin L. Kutscher, 2014-03-21 The completely updated and expanded new edition of this well-established text incorporates DSM-5 changes as well as other new developments. The all-in-one guide covers the whole range of often co-existing neuro-behavioral disorders in children - from attention deficit hyperactivity disorder (ADHD), obsessive-compulsive disorder, and anxiety, to autism spectrum disorders, nonverbal learning disabilities, Tourette's, sensory integration problems, and executive dysfunction. A completely revised chapter on the autism spectrum by Tony Attwood explains not only new understanding in the field, but the new diagnostic criteria, and the anticipated usage of the term 'Asperger's Syndrome'. Dr. Kutscher provides accessible

information on causes, symptoms, interactions with other conditions, and treatments. He presents effective behavioral strategies for responding to children who display traits of these disorders - whether at home, at school, or in other settings - along with case vignettes and practical tips. Finally, a chapter on the role of medications summarizes current knowledge. The author's sympathetic yet upbeat approach and skillful explanations of the inner world of children in the syndrome mix make this an invaluable companion for parents, teachers, professionals, and anyone else who needs fast and to-the-point advice on children with special needs.

Periodization Tudor O. Bompa,G. Gregory Haff,2018-04-24 Learn how to train for maximum gains with *Periodization: Theory and Methodology of Training*. Guided by the expertise of Tudor O. Bompa, the pioneer of periodization training, and leading periodization researcher G. Gregory Haff, you'll learn how to vary the intensity and volume of training to optimize the body's ability to recover and rebuild—resulting in better performance and less risk of injury. Translated into nine languages, *Periodization: Theory and Methodology of Training* has become one of the major resources on periodization for sport scientists, coaches, and athletes throughout the world. Since the introduction of this groundbreaking training theory by Tudor O. Bompa in 1963, periodization has become the basis of every serious athlete's training. Now in its fifth edition, Bompa's classic text combines the concepts central to periodization and training theory with contemporary advances in sport science, physiology, and coaching. No other text discusses planning and periodization in such detail or with so many specific, practical examples from a variety of sports. With the fifth edition of *Periodization*, you can learn the principles, objectives, and components of a successful long-term training program and how to plan the right program to achieve your performance goals. *Periodization* also contains proven strategies for optimal peaking and specifics on training for better motor ability, working capacity, skill effectiveness, and psychological adaptability. Better organized and easier to read, the fifth edition of this definitive text presents the latest refinements to periodization theory: • New research on rest and restoration, specifically countermeasures used in facilitating recovery plus practical suggestions for implementation • How the use of sequential training and delayed training effects can produce optimal performance at major competitions • A comprehensive discussion, grounded in scientific data, on applying various methods of peaking to ensure optimal performance for competition • New information on how concepts such as conjugated sequencing and summated microcycle structures can maximize strength gains and direct training • Expanded information on the development of sport performance characteristics, including speed training and sport-specific endurance Chapter summaries will help you review and reference major concepts throughout the text. Plan and document each training program with ease using the duplication-ready annual and four-year training plan charts included in the appendix. When it comes to designing programs for optimal training, Tudor Bompa's expertise is unmatched. The fifth edition of *Periodization: Theory and Methodology of Training* presents the latest refinements to Bompa's periodization theory to help you create training programs that enhance sport skills and ensure peak

performance.

Buyology Martin Lindstrom, 2010-02-02 NEW YORK TIMES BESTSELLER • “A fascinating look at how consumers perceive logos, ads, commercials, brands, and products.”—Time How much do we know about why we buy? What truly influences our decisions in today’s message-cluttered world? In *Buyology*, Martin Lindstrom presents the astonishing findings from his groundbreaking three-year, seven-million-dollar neuromarketing study—a cutting-edge experiment that peered inside the brains of 2,000 volunteers from all around the world as they encountered various ads, logos, commercials, brands, and products. His startling results shatter much of what we have long believed about what captures our interest—and drives us to buy. Among the questions he explores: • Does sex actually sell? • Does subliminal advertising still surround us? • Can “cool” brands trigger our mating instincts? • Can our other senses—smell, touch, and sound—be aroused when we see a product? *Buyology* is a fascinating and shocking journey into the mind of today’s consumer that will captivate anyone who’s been seduced—or turned off—by marketers’ relentless attempts to win our loyalty, our money, and our minds.
