2009-06-08

this biology extension file includes teaching notes guidance on coursework activities and equipment it has at least one assignment for each topic in the textbooks suitable for classwork and homework a comprehensive range of practical activities are included it contains extensive key skills and ict materials an exam file resource containing a complete set of exam style questions in a format that can be used throughout years 10 and 11 or as a resource for a revision programme is included

13+ Science Biology Mark Scheme (Spring Term 2011)

2011-02-04

this support pack has been fully revised and updated with additional guidance on developing the new specifications activities ict support technician cards additional revision and assessment material including past paper questions and model answers

13+ Science Biology Mark Scheme (Summer Term 2010)

2010-06-21

this outstanding book deserves to be very widely read i hope it makes a major contribution to how school biology is taught dr michael j reiss professor of science education university of london this is a book that all teachers not just biology teachers should read ben strathearn burrows head of biology emanuel school what you ll find inside a vision for an integrated and meaningful biology education a framework for teaching for meaning making which cuts planning time ways of creating a unified narrative across disparate topics a taxonomy of understanding that unlocks problem solving with minimal workload tried and tested examples from mixed attainment biology classrooms introduction i ve been motivated to discover what biology is to us as humans what it means to understand biology and how i could make it meaningful for my students i ve read as much as i could and reflected i ve discussed and listened i ve taught and observed while it doesn t cover all aspects of biology education this book is about sharing what i ve learnt on my journey of synthesising and trialling ideas with my

~~secondary school mixed attainment biology~~

classes not only is this book likely to change how you teach biology but also how you perceive yourself within the living world dr alex sinclair institute of education st mary s university twickenham chapter 1 meaningful biology relates principally to organisms this sets the scene for the whole book it brings together many threads to define what i see as most meaningful to secondary biology students and therefore what we could do about it when designing our lessons curricula and thinking about how students progress through their biology education planning for meaning making has vastly enhanced interest and motivation to learn in my classroom chapters 2 3 teaching for meaning using variation theory next i introduce a powerful relatively unknown and often misunderstood pedagogical theory variation theory in these chapters i set out to show how useful it is and easy to use in the secondary biology classroom with many examples chapter 4 how to integrate organisms ecology evolution now i pull together the previous chapters to present a new framework for teaching for meaning making that cuts planning time focuses on biology an excellent text demanding we think not just about what we teach but also why and how dr paul ganderton consultant and researcher chapter 5 concepts of the organism that unite a biology course

~~here i discuss two concepts that i think can~~
unify all the topics on the curriculum 1
seeing biology through thermodynamic systems
lens and 2 seeing biology through an
ecological evolutionary lens via the concept
of life strategies i lay out the reasons why
and discuss how i ve introduced these ideas
with students chapter 6 teaching systems
thinking to help students see
interconnectedness this chapter is dedicated
to systems thinking firstly i show how stock
and flow diagrams are very useful for the
biology classroom and give examples next i
introduce a new taxonomy of understanding
biological systems chapter 7 establishing a
thinking classroom this chapter is focused on
the whys and hows of embedding the taxonomy
into my biology curricula i give examples of
how i use it and examples of my students
answers from lower and upper secondary courses
chapter 8 navigating classroom and biological
complexity this chapter rounds up the book by
considering the complexity of our subject and
the classroom biology made real comes with an
education health warning be prepared to have
your beliefs challenged dr alex sinclair
